

Instructions

Each 4.25 lb. jug of IMPACT will treat 1/4 acre.

Sprays easily through fine-mist nozzles

1. When you are ready to add IMPACT to the spray solution, fill the IMPACT jug 3/4 full of water, and **SHAKE FOR 15 SECONDS to THOROUGHLY MIX INTO A SLURRY, AND IMMEDIATELY POUR THE SLURRY INTO THE SPRAY TANK. DO NOT ALLOW IMPACT AND WATER TO SIT IN THE JUG.**
2. Pour the contents into spray tank containing 6-9 gallons of water for each 1/4 acre of IMPACT to be applied.
3. Apply directly to the soil before seeding your plot. Can also be applied to emerging or existing plantings to boost nutrient uptake and stimulate forage growth.
4. Depending on soil type and rainfall amounts, IMPACT can improve forage quality and growth for 3-5 months with one application, which is sufficient for most annual plantings. Perennial plantings can benefit from two or three applications several months apart.
