

DAVID EILERS | NEW YORK

■ Since using Whitetail Institute products, the difference of seeing deer on the properties where it was used is striking. One of the biggest differences is that Imperial Whitetail clover comes in early and provides a great source of protein for deer when other sources aren't yet available. We've had more deer and bigger bucks taken on the property since using Whitetail Institute products. The deer in this picture was taken on land in Albany County, New York, where we've used Whitetail Institute products for quite a few years.
